

ScheduleOnce Now Available Through the Google Apps Marketplace

March 9, 2010 -- ScheduleOnce announced today that it has added its Private Edition to the Google Apps Marketplace™, Google's recently launched online storefront for Google Apps™ products and services. The ScheduleOnce Private Edition is an online meeting scheduler that streamlines meeting scheduling and extends Google Apps to support cross-organizational scheduling. With ScheduleOnce, meeting organizers can easily propose multiple times for a meeting and view availability for both internal and external invitees in one simple interface. Designed specifically for Google Apps, ScheduleOnce is an enterprise-grade meeting scheduler that is private labeled with the organization's brand.

"Google Apps is a truly open and extensible messaging and collaboration platform, so integrating with Google Apps was a logical choice for us," says Gilad Goraly, ScheduleOnce CTO. "By adding ScheduleOnce to the Google Apps Marketplace, Google Apps customers are able to streamline their meeting scheduling process through a solution that integrates seamlessly with their messaging and collaboration platform."

ScheduleOnce is completely integrated into the Google Apps working environment and can be used from the Personal ScheduleOnce Dashboard or from a native Google Gadget™ that can be added to Google Calendar™ or Gmail™. From this gadget the meeting organizer can propose multiple times for a meeting, evaluate invitee availability and schedule the meeting. The ScheduleOnce Private Edition is secured with single sign-on (SSO) through Google Apps and is compatible with all Google Apps Editions, including Standard, Premier, Education, Non-profit and the Partner Edition.

"We are very excited to have ScheduleOnce in the Google Apps Marketplace," adds Scott McMullan, Partner Lead for Google Apps. "Through the Google Apps Marketplace, ISVs like ScheduleOnce are helping us build a rich ecosystem of integrated apps that work seamlessly with Google Apps, allowing IT administrators to leverage the benefits of cloud computing and extend Google Apps to meet more of their business needs. We are happy to offer ScheduleOnce to the millions of Google Apps users who have embraced the cloud."

The Google Apps Marketplace makes it easy for more than 2 million Google Apps customers to discover, purchase and deploy integrated business applications and related professional services. By integrating with user account and application data stored in Google Apps, these cloud applications provide a simpler user experience, increase business efficiency, and reduce administrative overhead.
